Abstract

Today, the development of technology and the types of new technologies are being developed a lot. This technology includes Digital Cameras, Laptops, Pocket Computers, and many other techniques, these technologies are in demand. Digital cameras NIKON The design of this camera leaves a good effect on a person. It can be collected in a small and thin state (108x73x69 ml) as well as in a frog pocket

Keyword: You need to select an SQ screen. And there will always be a boulecy, and you will not sit digging up every dafar menu again. I didn't like optical video because it's too small and the eye needs to be made too close to it. Therefore, it is easy to work with a enabled SQ display and is slave.

Introduction

Today, the development of technology and the types of new technologies are being developed a lot. This technology includes Digital Cameras, Laptops, Pocket Computers, and many other techniques, these technologies are in demand. Digital cameras NIKON The design of this camera leaves a good effect on a person. It can be collected in a small and thin state (108x73x69 ml) as well as in a turkey pocket. His black methylic corps does not play manually, and it is designed for ten hands. He reviewed a special flexible disk in the performance of the operation acceleration. With it, you need to select the last options on the SQ screen. And there will always be a boulecy, and you will not sit digging up every dafar menu again. I didn't like optical video because it's too small and the eye needs to be made too close to it. Therefore, it is easy and convenient to work with the enabled SQ display. But it loses a lot of energy when it's on. This is very satisfying to the monitor, which can be photographed in all different ways for their flexibility. It is 1,5 inches if not large, but very accurate and compact. Starter photographers are intended for automatic mode so as not to overwhelm the other knopka they've missed. All their mode is manually worn. Photos are clearly depicted when using by hand. The length of the lamp in the dark can reach a distance of 3 m. Those who are produced in telecommunications promise a distance of up to 4.5 m. Dark also applies sound while filming in the room. I regret that every dafar file razor does not have a small one. He photographs the object in it in a microrejim at a distance of 1 cm. Improved system or energy in 5400modelida. But I took 200 pictures for a day and a half or two from an acumulator charge once. Alliksandr Baulin Nikon presented his camera at the company by those in Russia. The Convenience of the Canon PowerChot A80 B is that it can be put in a pocket freely. It is convenient to take a picture with this apparatus. The block for the battery is designed for four batteries (or battery). AA is located in size, on the right side of the apparatus, making it convenient to maintain. The metal corpse has its beauty, design, and prevents it from being hit hard. Its turn-on monitor has four professional cameras unfortunately smaller. There is a convenient use of the apparatus, a rotation barbecue that performs fox functions. Selecting the imaging mode, the joystick and

four buttons perform functional tasks. In the process of operation, it can be said that the user can take control, using proxies and diaphragms on it. Panorama cadres are displayed on the screen and can be thrown into the computer. It should be said that the A80 apparatus is automatically read to Windows XP and copies it to a computer, changing its name by clicking on the keyboard on the computer. The quality of the photo does not pose any difficulties. Drawings taken in the dark, the focus of the hardware, and the color transfer are quality, leaving the user paralyzed. Casio QV-R5I

1B it is a camera digital camera whose convenience it fits into the pocket of the shirt. It can be used with one hand: the focus range is changed with a circle. Functional parameter is five positions, joystick. The stunning 2-inch screen and the Russian-language menu apparatus are convenient to work with functions. Users can use the hardware's diagram and sensitive matrix, white balance. It is located colored dots, which provide the light of the pictures. Manually controlled functionality is the prosharity of a much more convenient functional diaphragm and the lack of resistance and voice recorder. But this differs in the fact that the apparatus has a larger number of points than other apparatus. The apparatus QV-R5I apparatus provides macro-mode quality photos, which has become a habit for the casio company. The pictures taken at night come out well. Paintings as portraits are produced in quality. The camera's processor jpeg insures files very well. When extracting 10x16 pictures, the defects are invisible, which can be viewed if it is shown in A4 format. The fact that this apparatus needs its automation, menu, and other functions for users ensures the quality of the pictures. . The progress of NIKON R intelligent technology. In previous years, the cost of digital cameras was 1000 dollars. The accuracy of the permission and color sided with the photo with the film. As you can see in this example, with the help of a new model as film cuttings and numeric shears, the views become namayon, shortened with the vayaori indicators. The upper part of the photo shoot will keep the pointers in place with 899 dollars produced by the Eastman Kodak DC 260 photo camera, among the items we tested (1.6mlnpiksel); The well part is a 35-mmplyonkali camera. Nikon coolpix 900 s model recommends a camera. This camera is different from the picture and the colors are accurate. It is easy to work with the camera in automatic mode, experienced specialists can wear the parameters of this camera by hand. Nikon's firm recommends an object of exchange and an object of close visibility. Nikon camera sal Eastman Kodak sided with the DS 260 machine, but also at the price. The photo shoots she used were clear and good. When testing the twenty cameras, the three best digital cameras were selected from within, selecting them for model and image accuracy. To make the editorial business, the sphere recommended that Sony-FD produce 81 apparatus (\$800 at different prices). Its most basic is its convenience and accurate and long-term storage of information on disk. It's easy and hand-to-hand laughing at images using pK or something. This does not require adapter and additional hardware installations. These too were enough to get us used to it, but the experts at SONY continued. They looked at the photo camera keeping video clips on their hard drive for the duration of their small permit. The battery worth maxtash is in the continuation of the ijing. The image of the J.K. dispiley Solar Window is also forty in a bright place.
