

## EASY METHODS OF LEARNING FOREIGN LANGUAGES

Jorayeva Yulduz Rozikulovna

Karshi State Institute of Engineering Economics, German Language Teacher

### Abstract

This article presents easy learning of a foreign language, tips given by the teacher to the student during language learning, tactics for the student to learn the language until it reaches a perfect level.

**Keywords:** tactics; analysis; technology; integration; text.

### INTRODUCTION

The development of modern technologies in all of our lives has changed its aspects, including education, to an unprecedented extent. Governments around the world are investing heavily in education to improve information technology infrastructure and systems and expand access to educational technology.

Integration of modern technologies into education has become an unstoppable trend. Teachers of different levels are required to have the skills to use modern technologies in the educational process.

Nowadays, many foreign languages are taught in our country. For example, English, Russian, French, German, Arabic languages. Of these, English, French and German are among the most studied languages. Ten years ago, foreign languages were taught only from the 5th grade in the schools of our country. But later, as science and technology developed, changes were made to the education system. First, foreign languages were taught from the 1st grade, and later, foreign languages were taught in preschool educational institutions. In schools, language subjects are taught in 2 groups. The reason for this was that the teacher communicated with all the students in the class, explained the topic, and engaged the student in science during the lesson.

In some schools of our country, students can learn foreign languages at their own choice. For example, equal half of the class will be taught English, and the other half will be taught German or French according to the student's wishes. Of course, these efforts create conditions for the student to be more interested in the language and learn the foreign language he is interested in.

In order to learn foreign languages easily, regardless of which foreign language it is, first of all, it is necessary to approach it diligently.

- First, when learning a foreign language, you need to memorize a lot of new words. There is also an easy way to memorize a new word from the dictionary. It is more effective to memorize words not from the dictionary, but from the text and the words being formed.

Second, you need to practice listening comprehension more. It is necessary to listen during the day. Each completed listening comprehension exercise should be analyzed again and again. Then the result will be high.

- The third is text translation, learning how to work on text until it reaches a perfect level. It is necessary to learn the tactics and methods of text processing and to be able to analyze each text. It is necessary to memorize the words that appear in the text and pay attention to the places where they are used.

- Fourthly, you should learn to converse in the language you are learning. This direction mainly depends on the student himself. The reason is that a student who has learned the above types and grammar well should practice speaking independently and outside of class.

#### Summary

In our country, there is a proverb that says, "He who knows the language knows the people." In fact, nowadays there are enough jobs for everyone who knows a foreign language, whether young or old. In order to reach this level, it is necessary to study the language in depth and work until it reaches a perfect level.

The use of modern technologies can significantly increase the effectiveness of teaching and learning English, which is confirmed by many studies. Integrating modern technology into education has become a national strategy of education around the world. However, effective use of modern technology is more than just introducing technology into the classroom. That is, having technology does not mean successful integration of technology in teaching.
